Incorporating the Math Shifts into Teacher Preparation Programs
Agenda

➲ Introduction to the Math Shifts
➲ Helping pre-service teachers understand what they know about mathematics (Focus)
➲ Helping pre-service teachers recognize how they came to know what they know (Coherence)
➲ Helping pre-service teachers understand the role of different math tasks (Rigor)
What does the phrase “standards based instruction” mean to you?

What indicators could be used to identify that the instruction is standards based?

PROTOCOL

Quiet

Add as many ideas as you want

If you see something you agree with, draw a line to it.

Read. Think. Reflect.
Key Shifts in Mathematics

Focus: *Focus* strongly where the Standards focus.

Coherence: *Think* across grades, and *link* to major topics within grades.

Rigor: In major topics, pursue conceptual *understanding*, procedural skill and *fluency*, and *application*.
Shift #1 – Focus strongly where the Standards focus

- Significantly narrow the scope of content and deepen how time and energy is spent in the math classroom.

- Focus deeply on what is emphasized in the Standards, so that students gain strong foundations.
Shift #1 – Focus strongly where the Standards focus

- Move away from "mile wide, inch deep" curricula identified in TIMSS.
- Learn from international comparisons.
- Teach less, learn more.
- “Less topic coverage can be associated with higher scores on those topics covered because students have more time to master the content that is taught.”
Traditional US Approach

- Number and Operations
- Measurement and Geometry
- Algebra and Functions
- Statistics and Probability
Focusing Attention within Number and Operations

- Operations and Algebraic Thinking ➔ Expressions and Equations ➔ Algebra
- Number and Operations—Base Ten ➔ The Number System ➔ High School
- Number and Operations—Fractions

K 1 2 3 4 5 6 7 8
Key Areas of Focus in Mathematics

<table>
<thead>
<tr>
<th>Grade</th>
<th>Focus Areas in Support of Rich Instruction and Expectations of Fluency and Conceptual Understanding</th>
</tr>
</thead>
<tbody>
<tr>
<td>K–2</td>
<td>Addition and subtraction - concepts, skills, and problem solving; place value</td>
</tr>
<tr>
<td>3–5</td>
<td>Multiplication and division of whole numbers and fractions – concepts, skills, and problem solving</td>
</tr>
<tr>
<td>6</td>
<td>Ratios and proportional relationships; early expressions and equations</td>
</tr>
<tr>
<td>7</td>
<td>Ratios and proportional relationships; arithmetic of rational numbers</td>

Shift #2 – Coherence: Think Across Grades and Link to Major Topics Within Grades

- Carefully connect the learning within and across grades so that students can build new understanding on foundations built in previous years.
- Begin to count on conceptual understanding of core content and build on it. Each standard is not a new event, but an extension of previous learning.
- Coherence in K-8 standards prepares students for success in high school.
- Coherence within courses provides focus for high school.
- Coherence in high school provides focus within courses.
Shift #3 – Rigor: In Major Topics, Pursue Conceptual Understanding, Procedural Skill and Fluency, and Application

- The CCSSM require a balance of:
  - Conceptual understanding
  - Procedural skill and fluency
  - Application of concepts and skills in problem solving situations

- Pursuit of all three requires equal intensity in time, activities, and resources.
Conceptual Understanding

- Teach more than “how to get the answer” and instead support students’ ability to access concepts from a number of perspectives.
- Students are able to see math as more than a set of mnemonics or discrete procedures.
- Conceptual understanding supports the other aspects of rigor (procedural skill and fluency and application).
Procedural Skill and Fluency

The Standards require quick and accurate calculation. Does that mean speed?

Teachers structure class time and/or homework time for students to practice core functions (such as single-digit multiplication) so that they are more able to understand and manipulate more complex concepts and procedures.
Application

- Students can use appropriate concepts and procedures for application even when not prompted to do so.
- Teachers provide opportunities at all grade levels for students to apply math concepts in “real world” situations, recognizing this means different things in K-5, 6-8, and HS.
- Teachers in content areas outside of math, particularly science, ensure that students are using grade-level-appropriate math to make meaning of and access science content.
Unpacking a Standard

1. Analyze the cards detailing a standard
2. Develop criteria for what “unpacking” a standard includes

What are the benefits for pre-service teachers?
What are the obstacles?
Progressions

Select one of the progressions provided
Complete an “I notice / I wonder” chart
Share with other groups

What are the benefits for pre-service teachers?
What are the obstacles?
Coherency Map

The Coherence Map shows the connections between Common Core State Standards for Mathematics.

Get Started
Task Sort

Sort the task cards into groups based on the primary purpose

- Conceptual Understanding
- Procedural Fluency
- Application

What are the benefits for pre-service teachers?
What are the obstacles?
